

DAY 03: BUSINESS CASE STUDY

Statistics in Real Life | Jewelry Showroom Example

1. MODE: Solving the Stock Mystery

Scenario: Out of 100 customers, 60 bought Gold Rings, 30 bought Silver Chains, and 10 bought Diamond Bangles.

Udaharan: 100 customers mein se 60 ne Gold Rings li, 30 ne Silver Chains aur 10 ne Diamond Bangles.

Business Insight: The 'Mode' is Gold Rings.

Business Insight: Mode yahan Gold Rings hai.

Agli baar aap stock mein Gold Rings zyada rakhenge kyunki ye "Most Popular" hai.

2. MEAN: Planning the Budget

Scenario: You pay 5 karigars (workers) salaries: ₹15k, ₹16k, ₹14k, ₹15k, and ₹15k.

Udaharan: Aapne 5 karigaron ko salary di: ₹15k, ₹16k, ₹14k, ₹15k, aur ₹15k.

Business Insight: The 'Mean' is ₹15,000.

Business Insight: Mean yahan ₹15,000 hai.

Isse aapko naye staff ko rakhne ka ausat (average) kharcha pata chal gaya.

3. MEDIAN: Finding the Real Target Customer

Scenario: 5 customers spent: ₹10k, ₹12k, ₹15k, ₹20k, and ₹5,00,000 (Outlier).

Udaharan: 5 customers ne kharcha kiya: ₹10k, ₹12k, ₹15k, ₹20k, aur ₹5,00,000 (Outlier).

Business Insight: The 'Mean' is ₹1.1 Lakh (Wrong Picture), but the 'Median' is ₹15,000.

Business Insight: Mean ₹1.1 Lakh hai (jo galat hai), lekin Median ₹15,000 hai jo "Asli Range" batata hai.

Aap apni marketing ₹15,000 wale customer ke liye karenge, na ki lakhpati ke liye.

Conclusion: Statistics helps you make decisions based on data, not guesses!

Conclusion: Statistics aapko andazay se nahi, balki data ke adhaar par faisle lene mein madad karta hai!
